

MSD.Cloud

MSD.Cloud is a hosted EPoS Back Office solution for use with Uniwell EPoS Systems that can be used in conjunction with the ePOS Office, ePOS Sales or ePOS Central back office software applications

Linked To ePOS Office

MSD.Cloud provides an online reporting option for ePOS Office, the ePOS Office (or Sales) package pushes sales, stock and product file changes to an online database where the end user can access online from anywhere with an internet connection and browser.

MSD.Cloud includes a dashboard, extensive sales & stock reporting and all the reports generated can be exported to CSV, XML, HTML or PDF for easy printing and sharing with other applications.

Some of the reports currently available are; Trading Summary, Weekly Summary, Period Summary, Product Sales, Site Sales, Hourly Sales, Receipts, Banking & Cash, Transactions, Clerks, POS Transactions, POS Reports, Stock Position, Stock Variance, Period End and a range of reference data reports.

The dashboard allows the end user to configure a range of KPI (Key Performance Indicator) thresholds to alert users to potential operational issues such as unusually high levels of corrections, no sales, refunds, etc.

Linked To ePOS Central

With ePOS Central the interface to MSD.Cloud is two way so changes can be made online and pulled back into the ePOS Central system. This allows users to enter cash and banking data, stock transactions and product file changes via the MSD.Cloud interface which is then synced with ePOS Central

This solution is ideal for small to medium multiples when an ePOS Central can be installed at a Company HQ with sites having access to data via MSD.Cloud - The ePOS Central can communicate directly with the POS via a VPN, port forwarding or using the FTP push facility built into the Uniwell TX, DX, AX and HX series.

A range of Cash Management features allow the user to maintain tight control of the cash in their premises as well as the stock including;

- POS receipts to be declared by denomination to prevent errors in adding up
- The ability to enter a POS float during the cashing up process
- The ability to cash up all POS as a single till for easier cash management
- An option to enter a safe count by denomination and obtain a safe variance amount.
- An option to adjust the safe float for seasonal variations in float levels

Translation

MSD.Cloud can be translated into any language; this is done on a country by country basis so the distributor for each country can control their own language file allowing them to cater for regional variations of languages.

The end user can then switch their MSD.Cloud installation into any of the available languages.

Custom Reports

As well as a range of pre-configured reports, MSD.Cloud allows the user to configure a number of custom totals reports allowing them to bring together many of their key figures together on a single report.

Date	Cash Media	Drink Sales	Refunds Value	Corrections	Main Courses	No Sales
30/05/2016	0.00	0.00	0.00	0.00	0	0
31/05/2016	0.00	902.15	-12.00	-21.05	30	0
01/06/2016	5.00	1,313.55	-11.50	-14.85	55	0
02/06/2016	0.00	346.90	0.00	0.00	5	0
03/06/2016	0.00	977.80	0.00	0.00	20	0
04/06/2016	0.00	348.30	0.00	0.00	0	0
05/06/2016	0.00	414.85	0.00	0.00	15	0

Coming Soon

In addition to the current application linked versions, a standalone version of MSD.Cloud should be available later in 2017

This version will use a small server program running on the users premises linking the Uniwell EPoS terminal directly to MSD.Cloud so that any PLU and price changes made on the EPoS terminal will push to MSD.Cloud along with end of day reports and other data.
