

The explosive growth of the red-hot Cici's Pizza Buffet concept has been fueled by its commitment to serving high quality food at phenomenally low prices. Cici's offers 16 kinds of fresh, hot, delicious pizza, pasta, salad and desserts in a \$3.99* all-you-can-eat

buffet format. Kids three and under eat for FREE! Cici's is a safe, clean, family environment offering fresh tastes at a great price.

You'll find them serving hungry, pizza-loving folks in suburban areas of large metropolitan cities, as well as in small to medium-sized towns. They seek high exposure, 4000 square foot locations in high visibility shopping centers or freestanding buildings.

Over 90% of Cici's Pizza restaurants are franchised. They welcome both single franchise and multi-unit owners who have a passion for quality and service.

CiCi's Pizza began using Uniwell Model SX-700 in July of 2003. The SX-700 quickly caught on with franchisees who had a need for integrated credit card processing in their stores. The CiCi's Franchise Committee had just signed an agreement with a 3rd party software company to provide an enterprise wide polling and reporting system and they were looking for a product with reliable serial communications.

The value of the SX-700 has proven itself to be very popular with the franchise community with over 125 terminals installed in over 60 locations.

Last year we introduced the DX-890 to two corporate stores in the Dallas area. CiCi's is currently developing their own enterprise wide communications package to incorporate the TCP/IP functions of the DX-890.
